

C# P-5 Loops

Write a C# program using repl.it that uses a loop to input # at bats and # of hits for each of the 9 baseball players on a team. Team name, player name, and player position will also be input.(two dimensional array) The program should then calculate and print the individual batting average and, after all 9 players have been entered, calculate and print the team batting average.

Example of inputs and Outputs...

Enter the Team name: *(one time entry)*

Astros

Enter the Player Name:

J. James

Enter the Players Position:

Center Field

Enter The Number of at Bats:

23

Enter the Number of Hits:

14

J.James batting average is: .608695

8 Additional players entered...

The batting average for the Astros is .40898866
