

C# P-9

Programming PLO-2 Measured: Design, implement, and evaluate computer solutions utilizing structured and object-oriented programming methodologies.

Design a class named Contractor. The class should keep the following information:

- Contractor name
- Contractor number
- Contractor start date

Write one or more constructors, and the appropriate accessor and mutator functions for the class.

For this assignment and P-10 you will have to include an algorithm for your program. This will be a word document attached to the dropbox.

Submit your REPL.it link to the written submission section of the assignment dropbox.

This code **will** be used in P-10
